Greek — Native

English — C1 / B2

CERTIFICATIONS

Responsive Web Design
freeCodeCamp

Java Explorer
Oracle

PROFILE

Web developer with 7 years behind me now and 15+ sites and web apps delivered, building everything from WordPress sites to full Node.js backends. I've worked inside an agency, run my own freelance clients across architecture, hospitality, and legal services under my own brand, and still contribute to an open-source game server project in my spare time. I like taking a project from a first call to something live and working, and staying around after launch to keep it that way.

EXPERIENCE

Web Developer · Interbrain
Mar 2024 — Present

Rethymno, Greece

- Build custom WordPress themes and plugins to client specs, rather than starting from a stock template
- Hook up third-party APIs and tools when a client needs something WordPress doesn't do out of the box
- Handle technical support directly with clients when something breaks or needs changing

Independent Web Developer · manyf.me
2024 — Present

Freelance / Remote · parallel to Interbrain

- Run my own client base of six ongoing accounts under my own brand, spanning architecture, hospitality, accommodation, and legal services
- Rebuilt an architecture studio's site from the ground up: new theme, new CSS system, new typography, and a custom interactive map of their project locations across Crete
- Handle the whole relationship myself: the pitch, the build, the SEO, and whatever comes up after launch

Web Developer · Fiverr / Upwork
Apr 2021 — Jan 2024

Remote

- Built and delivered a dozen-plus responsive sites for clients worldwide, tested across browsers and devices
- Wrote backend logic in Node.js against MySQL and MongoDB
- Deployed and managed sites with Nginx and Docker

IT Manager · Anteka AE
Sep 2020 — May 2021

Rethymno, Greece

- Kept office computers running and dealt with hardware/software issues as they came up
- Managed relationships with hardware and software suppliers

PROJECTS

Orderify · github.com/dev-katara/orderify
A QR-code food ordering app built solo: customers scan a code at their table, browse the menu, and order straight from their phone.

Hotel Guest-Experience SaaS · advisory
Scoped and advised on an AI concierge concept for hotels accessed via in-room QR code, including pricing model research and deal structure.

Personal Portfolio · manyf.me
Monochrome, JetBrains Mono-based site with an EN/GR toggle, showcasing six client projects.

Private Game Server & Client · github.com/dev-katara
Run a Java/XML-based private multiplayer game server with custom scripts, event systems, and PvP ranking. On the client side, work directly in Unreal Engine 2.5 and UnrealScript to merge and debug the in-game UI: diffing compiled vs. retail source, merging class trees, and resolving compile errors across hundreds of files.

EDUCATION

Informatics Engineering
Hellenic Mediterranean University · Heraklion, Greece

Currently completing internship and thesis, degree expected end of 2026

Vocational High School · Software Technician
Rethymno, Greece

Graduated 2017
